

▼ CyberSpace Solutions Center – The Partnership

Facilitating Participation of all Stakeholders

Partnership in the CSSC, breeds success

- Barriers to collaboration and teamwork vanish
- Needs and solutions unite
- Vulnerabilities are identified and mitigated
- Communication facilitates consensus and solutions

The cyber infrastructures of the United States and its allies are vital assets for national security and the world economy.

Many pundits believe that cybersecurity must use all instruments of national power (diplomatic, intelligence, military and economic) to protect national security and public safety, ensure economic prosperity and assure delivery of critical services.

Partnership is crucial to the success of any cybersecurity strategy. Ideas, concepts and components of solutions exist in the fertile minds of academia, industry, scientists, military services and national agencies. Partnership and integration form the enabler for devising comprehensive solutions.

Transforming Concepts into Executable and Sustainable Solutions

Northrop Grumman is an industry leader in all aspects of computer network operations including defense, exploitation, and attack. To employ knowledge and deliver customers the right solutions with value added, the Company has created an enterprise where people and technology come together to secure the nation's cyber future. This enterprise is the CyberSpace Solutions Center (CSSC) – an environment for collaboration and information sharing without “not invented here” impediments.

The heart of the CSSC is the Cyber Test Range. With the test range's unique capabilities, Northrop Grumman is one of the nation's premier cyber solutions providers. Here, the company trains and equips its customers for objective-oriented defense, and its high-performance computing centers, labs, test ranges and R&D facilities enable realistic testing and diagnosis of how systems defend themselves in real attacks.

In the CSSC, Northrop Grumman focuses appropriate human resources and surrounds its core team with ingenuity from across the cyber community to maximize the probability of success for the nation. Northrop Grumman partners with its customers to integrate the full-spectrum of defensive, exploitative and attack technologies, products and services. The company has a deep understanding of the attack, supported by decades of exploitation experience in all aspects of the SIGINT mission, allowing it to devise effective defensive solutions that are agile, dynamic and adversary-driven.
