

TRW space technology patrols the farthest frontier...

For two years a nuclear arms control system has been orbiting the earth. Six nuclear detection satellites (NDS), designed and built for the Air Force by TRW, are on patrol to alert the Free World to clandestine atomic explosions as far out as 10 million miles. These vehicles are products of a company that has built more kinds of spacecraft than anyone. Back on earth, we also make parts for most autos and planes, components for most color TV sets, car and home radios. TRW is 40,000 people who apply advanced technology to products and services for the automotive, aerospace and electronic industries. TRW INC. has major facilities in Cleveland and Los Angeles and operations in 164 locations throughout the world.
