

e.POWER[®]

*For organizations seeking
innovative solutions for
integrated business*

THE VALUE OF PERFORMANCE.

NORTHROP GRUMMAN

By connecting people with business transactions and information technology, Northrop Grumman's e.POWER® delivers the value of business process management and online solutions. e.POWER combines the innovative use of process automation and application integration to help organizations manage outcomes and achieve best practices.

Orchestrating the Enterprise Process - Combining Information with Decisions and Actions

Automating enterprise response for online transactions and processing, e.POWER's workflow engine is central to all of our installed business process solutions. Orchestrating the interaction between departments and even between organizations helps generate significant return on investment. Information in one department affects decisions in another. The decisions define actions in the first organization as well as the second. Results are measured and become information as the cycle continues. Shortening the cycle and reducing errors increases mission effectiveness.

Imperatives of Integrated Business

- Modernize business processes and systems
- Real-time response in all business practices
- End-to-end transaction flow from initiation to fulfillment
- Unify enterprise applications; access information at its source
- Address document-centric transactions
- Rapid deployment for business improvements
- Support global requirements; remove barriers for internal/external users
- Balance workload to maintain high response rates
- Monitor and control business flow
- Breakdown organizational stovepipes

Build on existing application frameworks

- Certification and Licensing
- ERP Extensions and Shared Services
- Claims and Case Management
Incident Response Management
Electronic Personnel Folder
- Clearances and Credentials
- Identity Management
- Correspondence and Action Tracking

Northrop Grumman Corporation is a leading global security company providing innovative systems, products and solutions in aerospace, electronics, information systems, and technical services to government and commercial customers worldwide.

Our customers look to us for large-scale enterprise solutions. We support commanders who manage far-flung forces via global command, control and communications systems; police and firefighters who will access high-speed data and video over a new broadband wireless network; government agencies who need to meet cybersecurity requirements; battlefield commanders who use a tactical Internet to lead their troops; Department of Homeland Security staffers who rely on their classified network

infrastructure; intelligence analysts who rely on their systems to get actionable information into the right hands at the right time; missile defense analysts who model and simulate scenarios at the Joint National Integration Center; states, counties and cities who rely on the management of their information infrastructures to deliver responsive services to their citizens; and businesses that adopt new software solutions to make their enterprise processes run more smoothly and efficiently.
