

NORTHROP GRUMMAN

HEALTH

Improving Health Is the Heart of Your Mission

Today's health industry faces tough challenges. Costs continue to rise. Consumers want more control over their own health decisions. A technologically adept population expects immediate access to online health information and health records. The aging Baby Boomer generation increases the demand for already overstretched resources. And as globalization advances, health threats cross borders, even continents.

Health information systems and solutions play a critical role in meeting these challenges. Better solutions mean better information, when and where it's needed. This leads to better decisions and better health, the vital heart of every health professional's mission.

Northrop Grumman has been a leader in the health industry for more than 20 years. We have health professionals on staff with MDs and PhDs, as well as information technology (IT) specialists in health information exchange, clinical trials, scientific research and public health surveillance and informatics. So we know that simply providing IT to health-related organizations is not enough. Effective solutions must be tailored to the missions of those they serve. Equally important, health IT companies must be partners in these missions, not just providers of services and products.

This strategic view of the health industry is reflected in our approach at Northrop Grumman. Combining proven technical strengths, deep mission knowledge and far-reaching expertise in health and related sciences, we offer strategic health solutions in: *Clinical Information Systems • Healthcare Systems Management • Life Sciences • Public Health.*

Health Solutions Practice Areas

Clinical Information Systems

- Electronic health records
- Health information exchange
- Clinical informatics
- Terminologies and ontologies

Healthcare Systems Management

- Benefits coordination
- Enrollment, eligibility and entitlement systems
- Workflow, document and grants management

Life Sciences

- Bioinformatics
- Clinical research and trial support
- Health information management
- eSubmissions solutions

Public Health

- Public health informatics
- Epidemiology and biostatistics
- Behavioral health and health education
- Environmental and occupational health

Your mission is our mission

National and Global Solutions ...

Where It Matters Most

Through our four practice areas, Northrop Grumman helps customers meet their strategic mission requirements across the full life cycle of health – from supporting discovery and enhancing healthcare delivery to improving performance and quality and safeguarding public health through assessment and alerts.

Clinical Information Systems

Northrop Grumman has developed one of the world's largest electronic health record (EHR) systems, which serves more than nine million military and veteran beneficiaries. In addition, we have developed a health information exchange (HIE) that allows 172 military medical treatment facilities and veteran medical centers to share critical health information.

Healthcare Systems Management

From infrastructure to mission-critical applications, Northrop Grumman specializes in health IT services and systems integration. Our diverse range of customers includes the Centers for Medicare and Medicaid Services and the Veterans Benefits Administration. We provide benefits coordination; enrollment, eligibility, and entitlement systems; outcome research; workflow, document, and grants management; security and privacy systems and assessments; and comprehensive data management.

Life Sciences

Northrop Grumman manages clinical trials information, improves post-market surveillance and creates bioinformatics solutions for the pharmaceutical industry and leading academic institutions. We offer bioinformatics, health information management, information privacy and protection, lab information systems and management, disease surveillance systems, electronic health records, systems integration and assessments and clinical trials IT.

Public Health

Our public health practice area provides proven capabilities in epidemiology and biostatistics, global disease surveillance, emergency preparedness and response, occupational and environmental health and communications and education. Northrop Grumman is the largest IT contractor to the Centers for Disease Control and Prevention, with more than 140 public health professionals on staff.

Your mission is our mission

When Health Is at Stake ...

Your Mission Is Our Mission

Health is increasingly a national and global priority.

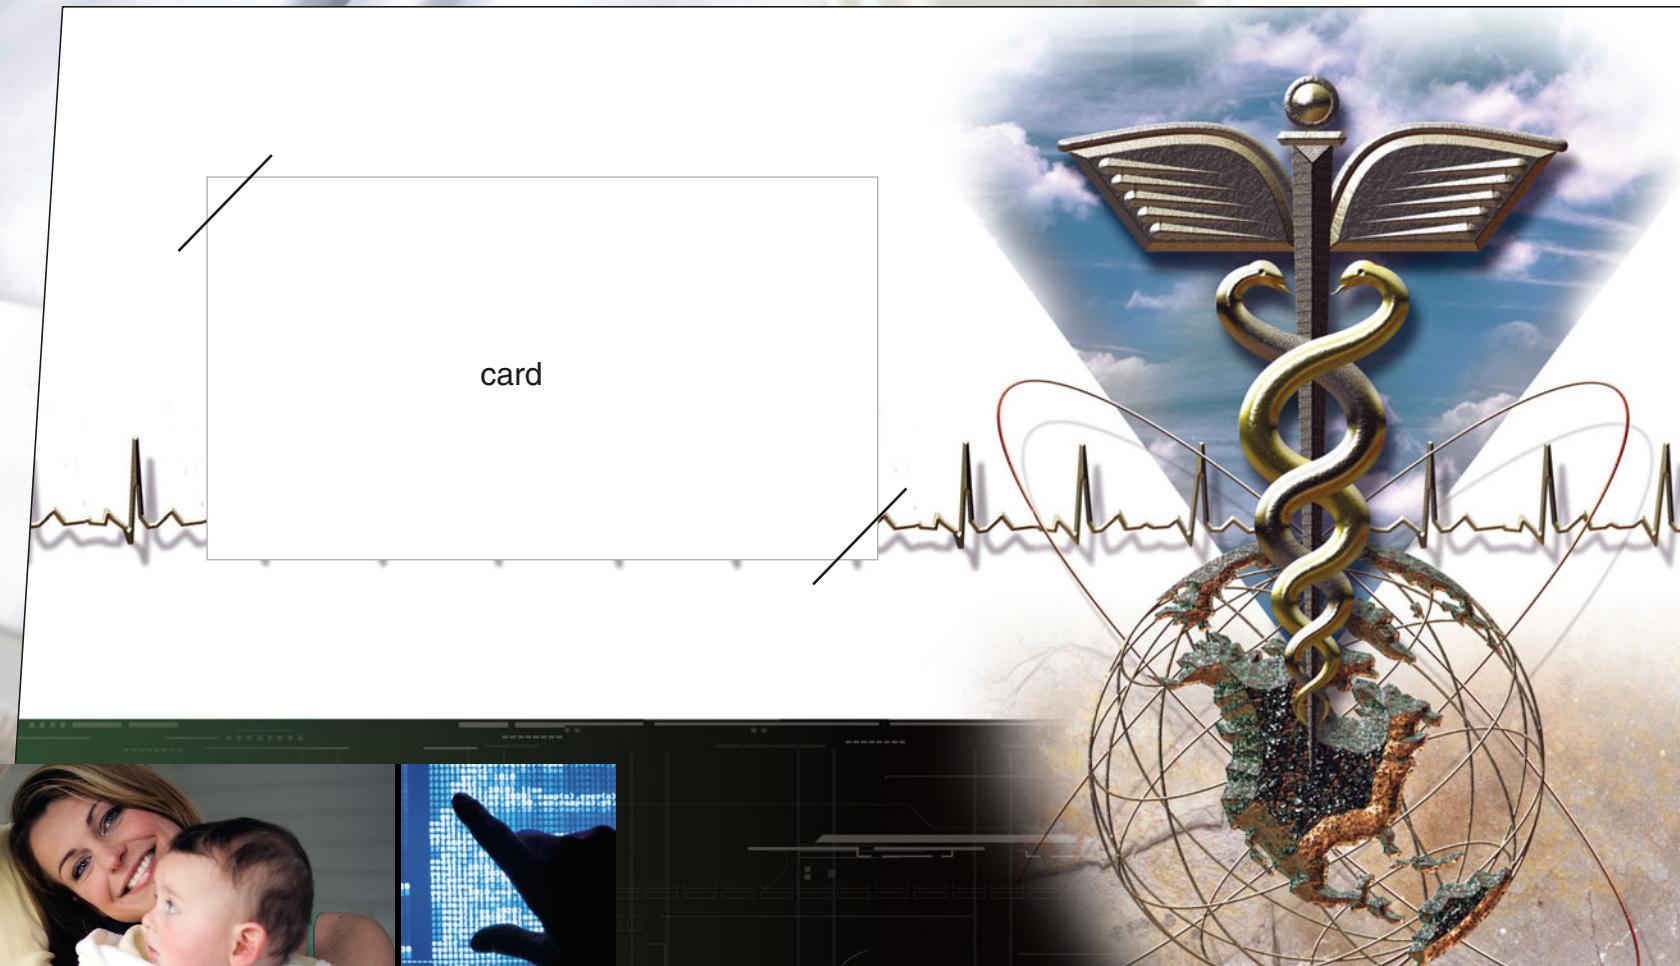

Innovative solutions are needed now. That's why government agencies and health organizations turn to partners they trust most. Partners like Northrop Grumman.

By focusing on today's rapidly changing health missions, we deliver solutions and services geared to difficult, real-world needs. The result is better, timelier information. And that leads to healthier lives.

Our people, resources and expertise stand ready to provide health solutions for a new generation of challenges. In research.

In management. In preparedness and prevention. And in all the other components that go into assuring improved health and well being, now and in the decades ahead.

Delivering expertise and experience for the full life cycle of health.
