KEI: A success at every stage.

KINETIC ENERGY INTERCEPTORS. A flexible, highly mobile missile defense system designed to defend the homeland, allies and deployed forces from hostile missiles at their most vulnerable stages of flight: boost, ascent and early midcourse. Achieving every milestone to date, KEI is on track to meet the Missile Defense Agency's timetable for a first booster flight in 2008. KEI, the next step in missile defense.
