

AstroMesh™ Reflector Parametrics

Evolution of AstroMesh Family

- AstroMesh hardware designs for a broad spectrum of applications
 - Aperture sizes from 3 to greater than 50-meter
 - Frequency range UHF to beyond Ka-Band

Comparison of AstroMesh Stowed Packages 12-Meter Deployed Aperture

AM

1st Generation Thuraya
Configuration Mounted
to Spacecraft Top
Deck

AM-1

Tighter Stowed
Package to Enable
Mounting on Spacecraft
Sidewall
6 to 25-m Class

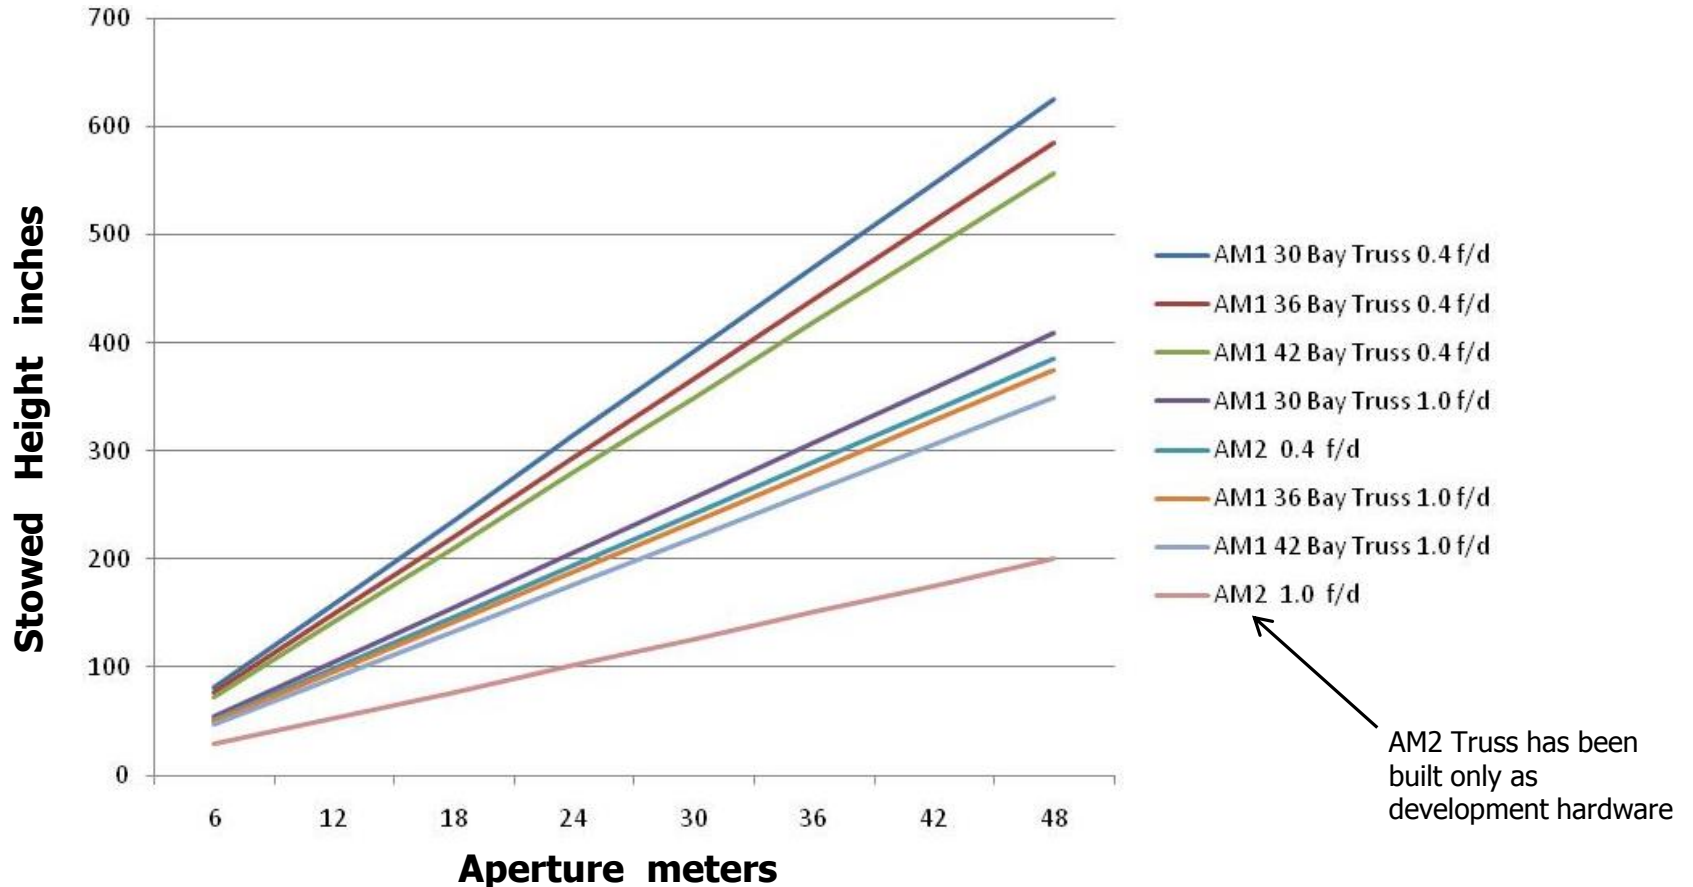

AM-2

Redesigned Truss
Articulation Reduces
Stowed Height
18 to 50-m Class

Reflector Stowed Package Height

- Increased F/D reduces stowed package height
- Increased number of rim truss bays reduces stowed height
- AMLite stowed package height is the same as AM1

Maximum Stowed Diameter

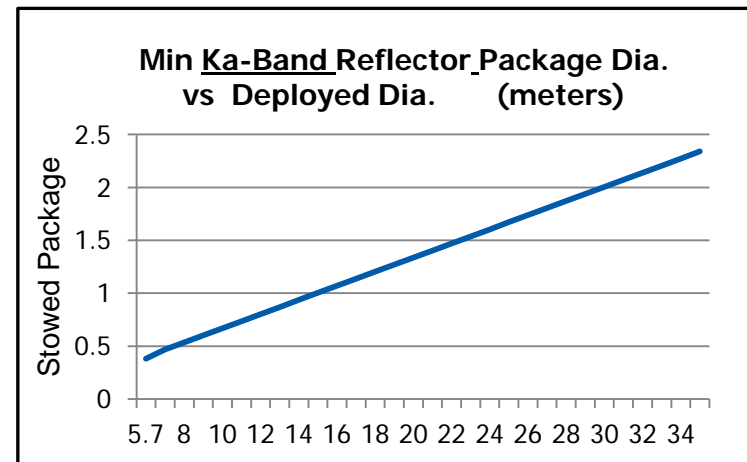

- Past developments have established standard ranges of reflector packaging
 - These are not optimized but minimize NRE
- In the AM-1 range,
 - reduced f/d increases ellipticity – reduces minimum diameter and increases maximum diameter
 - Increased bay count in the truss reduces stowed height but increases diameter
- The AM-Lite version produces a round – not elliptical - package.
- Reflectors with higher accuracy requirements (= or > Ka-Band) require larger packages (see next chart)

Achieving Surface Accuracy Requirements

Surface Accuracy Increase is Achieved by The Following Methods:

- **Increase mesh support network density**
 - Smaller facets
 - Can require increase in stowed package diameter

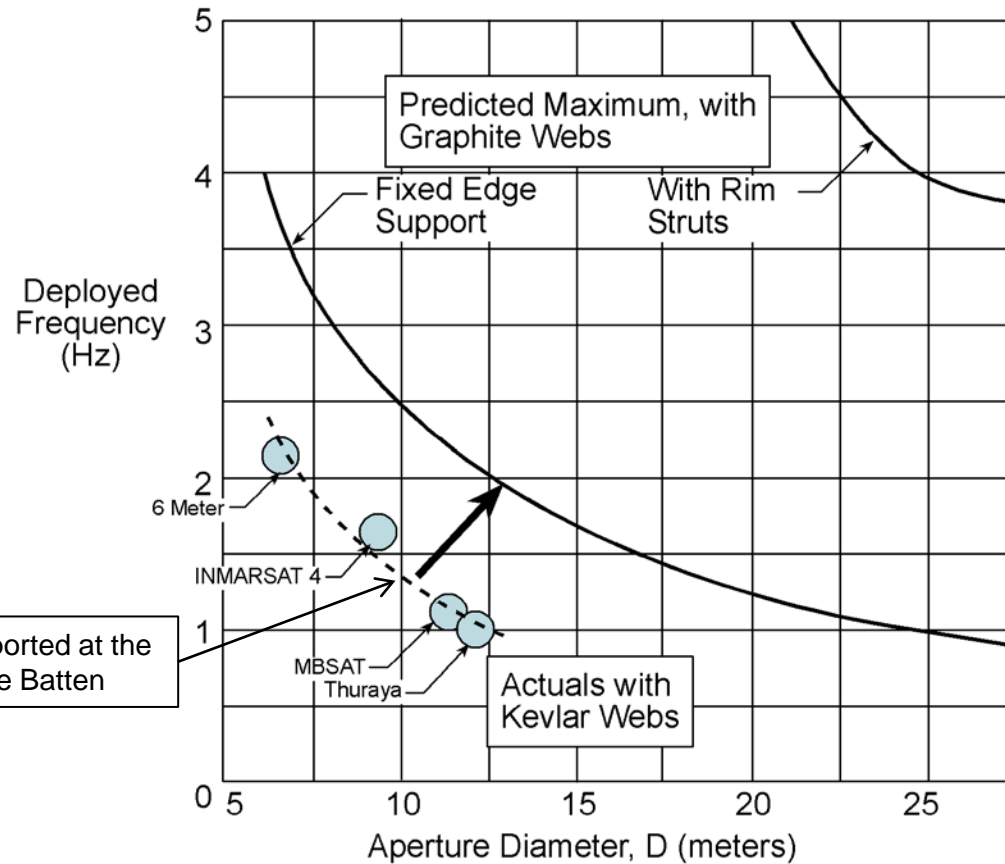

Reflector Mesh Reflectivity

- FEM analysis and test results correlate
- Principal and cross-pol reflectivity tests show no significant difference

Mesh Transmission Loss dB

Knit Density	Frequency GHz						
	1.5	10	20	30	40	50	60
10 opi	-0.05	-0.32					
20 opi		-0.06	-0.24	-0.51			
40 opi			-0.04	-0.14	-0.021	-0.035	-0.05

Deployed Natural Frequency, First Mode (Reflector only)

- Fixed edge support

- Rim support struts increase frequency 4x

- Please note that the frequencies shown are ideal, actual frequencies are dependent on spacecraft boom and structure compliance

NORTHROP GRUMMAN
