THE VALUE OF PERFORMANCE.

NORTHROP GRUMMAN

Foundry Services

The Northrop Grumman foundry, located in Redondo Beach, California, processes commercial volumes of hetero-junction bipolar transistors (HBT) and high electron mobility transistors (HEMT) for monolithic microwave and millimeter wave integrated circuits (MMICs).

These high-performance circuits are used in established and emerging commercial markets, including cellular and broadband wireless systems, and cutting-edge aerospace, defense and scientific applications.

Foundry Capabilities

- Advanced process technologies that enable differentiating MMIC and system performance
- In-house multi-wafer Molecular Beam Epitaxy for precision control of device doping profiles
- Process Design Kits with synchronized layout and model sets optimized to millimeter wave, low noise and power applications
- Mature and reliable processes
- Stability of defense critical DoD Trusted Foundry
- Volume wafer fabrication facilities
- Multi-customer shared mask foundry runs
- On-wafer RF testing beyond 110 GHz

300 GHz HBT and HEMT

Indium Phosphide (InP) wafer and amplifier

Fully Integrated GaN MMIC Technology

Parameter/ Technology	1 μ m power InP TF2P (HBT)	0.8 μ m digital InP TF2 (2Met, HBT)	0.6 μ m digital InP TF4 (4Met, HBT)	0.15 μ m GaAs PHEMT (P3H)	0.1 μ m GaAs PHEMT (P3K, P3D)	0.1 μ m InP PHEMT (N60D)	0.20 μ m GaN HEMT (GAN20)
