Northrop Grumman’s Biodefense Solutions

Providing the technologies, capabilities, and experience to meet the ever-changing security threats of the 21st century.
Providing the technologies, capabilities and experience to meet the ever-changing security threats of the 21st century

A Clear and Present Threat
Protecting the health and well being of the American people in the event of a catastrophic health incident—whether the result of bioterrorism or naturally occurring—is one of the longest-standing and most important responsibilities of our nation’s government. Yet the realities of the 21st century pose new and ever-increasing challenges for the organizations tasked with this vital mission.

Global trade, international travel and the globalization of the food supply chain increase not just the likelihood but also the potential scope of both pandemic and food borne illnesses. Meanwhile, advances in biotechnology, the dual-use nature of biological equipment, the spread of bio-expertise, and the firm resolve of terrorist organizations, make the possibility of a bioterrorist attack an issue of not if, but when.

Building the Critical Infrastructure
This clear and present threat requires the continual development of newer and better detection methods: a robust infrastructure for information gathering, sharing and collaboration; and more effective preventive measures and treatments.

The United States has already taken aggressive measures to implement a broad range of biological defense capabilities. The challenge now is to build a national system-of-systems infrastructure—an infrastructure which provides virtually real-time situational awareness, supports communication and collaboration across all levels of government, and, most importantly, translates information into knowledge and knowledge into informed action.

Timely information, translated into meaningful knowledge regardless of perspective, is the goal we must seek as we confront both natural and man-initiated attacks. Disrupting our enemy’s timelines and accelerating response to affected citizens saves lives and preserves our vitality.

The ability to create this much-needed foundation is within our reach today.

A Trusted Biosecurity Partner
Northrop Grumman is providing solutions that are playing a central role in our nation’s biodefense strategy. Our vision, innovative thinking and proven experience—supported by our deep domain understanding from sensors to critical decision support systems of systems—are what make Northrop Grumman an agile, resilient and skilled partner focused on the safety and well being of Americans against enemies of our society.

We’re actively developing ground-breaking technologies and capabilities to support agencies at every level of government in their missions to anticipate, detect, prevent and respond swiftly and effectively to a biological event—no matter what the cause.

Our experience working with organizations addressing all facets of the biodefense challenge—both from a law enforcement and public health perspective—affords us a unique perspective to understand, identify and implement common solutions that address multi-faceted threats.

Above all, our passion and commitment to supporting the nation’s biosecurity solution is unparalleled. Our people and our capabilities are ready, willing and able to meet the ever-changing security threats of the 21st century.

Northrop Grumman’s Biodefense Capabilities
From sensors that provide early warning of an attack, to IT solutions that support the sharing of real-time information, to training and response systems that can save lives, Northrop Grumman is working with federal, state, local and private sector organizations to provide comprehensive biodefense solutions designed to equip decision makers with near-real-time information and insight.

Our capabilities support the key pillars of a national biodefense strategy in order to help our nation detect, prevent, respond and recover in the event of a biological incident.
