C0. Introduction

C0.1 Give a general description and introduction to your organization.

Northrop Grumman Corporation is a publicly owned company whose common stock is listed on the New York Stock Exchange (NYSE: NOC). Northrop Grumman is a leading global aerospace and defense company. We use our broad portfolio of capabilities and technologies to create and deliver innovative platforms, systems and solutions in space; manned and autonomous airborne systems; including strike; strategic deterrence systems; hypersonic; missile defense; weapons systems; cyber; command, control, communications and computers, intelligence, surveillance and reconnaissance (C4ISR); and logistics and modernization. We participate in many high-priority defense and government programs in the United States and globally. We conduct most of our business with the U.S. Government, principally the Department of Defense (DoD) and intelligence community. We also conduct business with foreign, state and local governments and commercial customers. Northrop Grumman established its environmental sustainability program in 2008 to reduce the company’s environmental footprint by improving operational efficiency and integrating environmental sustainability practices into all our operations. Our Environmental Sustainability Program strives to expand environmental sustainability awareness throughout our organization, supporting our corporate values and meeting the expectations of our diverse set of stakeholders. This program is a catalyst for environmentally sustainable performance that drives long-term affordability into our operations, benefiting our customers as well as our shareholders. Northrop Grumman has committed to the following 2020 environmental sustainability goals: a 30% reduction in absolute GHG emissions from 2010 levels, a 20% reduction in potable water use from 2014, and a 70% solid waste diversion rate from landfill. All quantitative data in this response represents Northrop Grumman prior to the acquisition of Orbital ATK.

C0.2 State the start and end date of the year for which you are reporting data.

*(C1.1) Is there board-level oversight of climate-related issues within your organization?*

- Yes
C1.1a

(C1.1a) Identify the position(s) (do not include any names) of the individual(s) on the board with responsibility for climate-related issues.

<table>
<thead>
<tr>
<th>Position of individual(s)</th>
<th>Please explain</th>
</tr>
</thead>
<tbody>
<tr>
<td>Board-level committee</td>
<td>The highest level of responsibility resides with Northrop Grumman’s Policy Committee of the Board of Directors (BoD). The Policy Committee is comprised of five independent directors who assist the BoD in overseeing policy, government relations and corporate responsibility, which includes review and oversight of the Company’s environmental sustainability program. This committee is responsible for identifying and evaluating global security, political, and budget issues as well as trends (including environmental and climate-related) that could impact the business. The BoD is responsible for overseeing our enterprise risk management activities, among other duties, and has board-level committees that assist the Board in this role. The Audit and Risk Committee is responsible for assisting the Board in its oversight of enterprise risk management overall and focuses on risks tied most directly to our financial performance, and those related to the environment, disasters, and security. The BoD and its Committees provide oversight of the Enterprise Risk Management Council (ERMC), which oversees risks, like extreme weather and natural disasters, which are climate-related. In addition, the Compensation committee establishes the annual non-financial ESG performance metrics, which includes Environmental Sustainability, specifically GHG emissions, water conservation, and solid waste diversion. The Compensation Committee approves the year-end non-financial performance metrics score, which factors into the Company Performance Factor as defined in the Proxy.</td>
</tr>
</tbody>
</table>

C1.1b

(C1.1b) Provide further details on the board’s oversight of climate-related issues.

<table>

<td>Annually</td>
</tr>
</tbody>
</table>

C1.2a

(C1.2a) Describe where in the organizational structure this/these position(s) and/or committees lie, what their associated responsibilities are, and how climate-related issues are monitored (do not include the names of individuals).

Per our Proxy Statement (p 14.): At the company level, the Board of Directors and its Committees provide oversight of the Company’s risk management processes, including the Enterprise Risk Management Council (ERMC). The ERMC (the Risk committee referred to in question C1.2) is chaired by the CEO and is comprised of all members of the Executive Leadership Team (includes the CFO, CHRO, CGBO, General Counsel, Chief Strategy & Development Officer, VP Communications, and the five sector presidents), the Chief Accounting Officer, Chief Compliance Officer, Corporate Secretary, head of Internal Audit and Treasurer. Climate-related issues are included within the ERMC responsibilities because the ERMC oversees Northrop Grumman’s integrated, company-wide risk management process. The ERMC seeks to ensure that the Company has identified the most significant risks and implemented effective mitigation plans for each; this includes climate-related risks related to natural disasters, environmental laws and regulations, and Company reputation. In addition, climate-related issues may be elevated to and addressed by the Policy Committee of the Board of Directors, which has responsibility for identifying and evaluating environmental sustainability
impacts and trends that could impact the company’s business. Certain members of the ERMC have responsibility for specific risks and are responsible for assessing risks, developing and executing risk mitigation plans, and monitoring status and trends. For example, specific climate-related issues such as natural disaster, environmental and regulatory, and Security including the Business Continuity Program are the responsibility of the CFO, VP General Counsel, and President of Enterprise Services respectively as part of their duties as members of the ERMC. The ERMC meetings consist of updates from certain members on the risks they manage and includes changes in the risks since the last meeting, risk mitigation efforts, or other potential risks that have been identified. For example, natural and environmental disaster risks are monitored at the site/asset level as a part of the Business Continuity Program through the use annual inspections and risk modeling, among other actions. Specifically, risk modeling is actively used at some of our coastal sites, like those in Melbourne and St. Augustine, FL to analyze how hurricanes of different sizes and scope might disrupt business operations. Any material changes in these results, trends, or risk management approach may be included in the update provided to the ERMC as the committee regularly monitors all risk factors for the company.

C1.3

(C1.3) Do you provide incentives for the management of climate-related issues, including the attainment of targets?

Description of process
The Board of Directors is responsible for overseeing our enterprise risk management activities, among other duties, and has board-level committees that assist them in this role. The BoD and its Committees provide oversight of the Enterprise Risk Management Council (ERMC) that oversees risks, like extreme weather and natural disasters, which are climate-related. The ERMC is comprised of all members of the Corporate Policy Council, the Chief Accounting Officer, Chief Compliance Officer, Secretary, head of Internal Audit and Treasurer. The ERMC seeks to ensure that the Company has identified the most significant risks and implemented effective mitigation plans for each; this includes climate-related risks such as those related to natural disasters, environmental laws and regulations, and Company reputation. Certain members of the ERMC have responsibility for specific risks and are responsible for assessing risks, developing and executing risk mitigation plans, and monitoring status and trends. The ERMC meetings consist of updates from certain members on the risks they manage and includes changes in the risks since the last meeting, risk mitigation efforts, or other potential risks that have been identified.

Through the Business Continuity Program, all asset risks are consolidated and evaluated at the site and sector leadership levels to determine if the risk is acceptable or if investment in controls is required. All risks identified, whether climate-related or not, are prioritized based on probability, business impact, and recovery time. The Business Continuity Program leverages annual physical security surveys to evaluate risks and opportunities and their potential impacts to the company, personnel, and/or operations. The survey’s risk factors include climate-related risk factors such as natural disasters as well as non-climate related risk factors such as disease control and/or outbreaks. Risks are evaluated to determine if the risk is acceptable or if investment in controls is required. In addition to business continuity planning at the asset level (individual facilities), risks and opportunities are addressed by the environmental sustainability program through site-specific greenhouse gas, energy, water, and solid waste assessments. These assessments provide more thorough understanding of site-specific risks to environmental sustainability indicators (e.g. water availability) as well as opportunities to improve the efficiency, minimize emissions, and/or reduce the risks to facility operations (e.g. through water conservation initiatives).

Business Impact Analysis is performed annually to assess the potential risk size and scope, prioritize recovery order of sites and business processes, and identify gaps in recoverability. The analysis assesses the impact to the company by determining the
financial, reputational and known legal impact if recovery is not achieved. When possible, we establish contingency plans in case our personnel or buildings are unavailable due to risks such as climate-related natural disasters. When we are unable to mitigate the issues, the risk is elevated on our annual resilience report to the sector and company leadership for key decision-making on whether to accept the risk or invest in controls to transfer or mitigate. The decision is generally based on the cost of investment and the impact to the corporation.

Our Annual Report, Item 1A: Risk Factors, lists factors that may have material adverse effect on our financial position, results of operations and/or cash flows. Specific to the Business Impact Analysis process at the site/asset level, the impact is determined on a scale of low, medium, or high based on a percentage of the company’s annual sales with medium and high impacts representing a substantive financial impact.

Efforts to manage climate-related risks also create opportunities for the Company. To capitalize on these opportunities, our environmental sustainability program collaborates internally to analyze, address, and pursue potential opportunities from resource efficiency to stakeholder engagement. By working towards our 2020 goals of a 30% reduction in greenhouse gas emissions from a 2010 base year, a 20% potable water use reduction from a 2014 base year, and 70% solid waste diversion from landfill, we are actively reviewing and implementing initiatives that not only reduce our environmental footprint, but are also positively influence the Company through cost savings, resiliency, or company reputation.

One case study of applying this process to a physical risk includes preparation for acute risks from extreme weather events. We have significant operations located in regions that may be exposed to damaging storms and other natural disasters. An example includes our Melbourne, Florida Manned Aircraft Design Center of Excellence. This facility is located in North Florida, near coastal waterways, and subject to hurricanes and tropical storms. This physical risk is reviewed by the ERMC and assessed by the Business Continuity Program through a Business Impact Analysis, which assesses the potential risk size and scope of a hurricane disrupting operations. A response plan is developed includes detailed strategies and protocols for preemptive tactical and post-event activity. Those strategies were put into action when Hurricane Irma made landfall September 2017, impacting our Melbourne facility and tens of thousands of Northrop Grumman employees. As a result of the Business Impact Analysis, risk handling and preparation by the Business Continuity Program, and oversight by the ERMC, the company was prepared to safeguard the health and safety of its employees before, during and after the hurricane. Five days before the hurricane made landfall, crisis management teams met and messaging distributed to employees. Two days before landfall, corporate aircraft transported vital supplies to employees and fuel trucks delivered the supply needed to operate generators running mission critical systems and during the hurricane these generators kept mission critical systems online. After the hurricane passed, first response teams arrived to sites as did RVs for business resumption purposes.

One case study of applying our risk management process to a transition risk includes
increased operating costs due to compliance requirements such as California’s Executive Order (EO) B-29-15 Drought Response that was signed by Governor Brown on April 1, 2015. When this EO was released, we worked with our California site teams to perform an analysis to understand the financial impacts of the EO on drought restrictions and drought utility charges on our operations. To mitigate the risk, we accelerated site water use assessments and our water conservation project investment plan which resulted in $2.5 million being authorized for water conservation measures in order to mitigate the risk and impact of any potential drought restrictions.

C2.2a

(C2.2a) Which risk types are considered in your organization’s climate-related risk assessments?

<table>

(C2.3a) Provide details of risks identified with the potential to have a substantive financial or strategic impact on your business.

<table>
<thead>
<tr>
<th>Identifier</th>
<th>Risk 1</th>
</tr>
</thead>
</table>

Where in the value chain does the risk driver occur?

Direct operations

Risk type & Primary climate-related risk driver

Acute physical
Increased severity and frequency of extreme weather events such as cyclones and floods

Primary potential financial impact

Decreased revenues due to reduced production capacity

Company-specific description

Per the risk factors stated in our Annual Report, our business is subject to disruption caused by natural and/or environmental disasters that could adversely affect our revenues, profitability and our overall financial position. Although preventative measures may help to mitigate damage, the damage and disruption resulting from natural disasters, the nature, frequency and severity of which we may be impacted by climate change, and delays in recovery may be significant. We have significant operations located in regions that may be exposed to damaging storms and other natural disasters. Examples include our St. Augustine, Florida Aircraft Integration Center of Excellence where the E-2D Hawkeye aircraft is manufactured and our Melbourne, Florida Manned Aircraft Design Center of Excellence. These facilities are located in coastal Florida, near coastal waterways, and are subject to hurricanes and tropical storms. Natural and environmental disasters could also disrupt the critical infrastructure needed for normal business operations.

Time horizon

Medium-term

Likelihood

More likely than not

Magnitude of impact
Medium-low

Are you able to provide a potential financial impact figure?
Yes, a single figure estimate

Potential financial impact figure (currency)
750,000

Potential financial impact figure – minimum (currency)

Potential financial impact figure – maximum (currency)

Explanation of financial impact figure
The financial impact represents the reduced revenue impact to our Melbourne, FL operations during Hurricane Irma. We established a cost collector to track costs and reduced revenue. The $750,000 equals the sum of lost production hours, employee time off and overtime, post-event cleanup, travel costs and diesel fuel for generators.

Cost of response to risk
0

Description of response and explanation of cost calculation
The Business Continuity Program is designed to enable the company to respond effectively to unanticipated events (e.g. natural disasters) with an emphasis on the protection of people, information and assets as well as continuity of mission. At the facility (asset) level, the Business Continuity Program leverages annual physical security surveys known as a Business Impact Analysis, to evaluate risks and opportunities and their potential impacts to the company, personnel, and/or operations. The Business Impact Analysis helps prioritize the recovery order of business assets and sites, identify gaps in recoverability, and help determine potential financial, reputational, and known legal impacts if recover is not achieved. Case study: During Hurricane Irma, the company executed this process at the Melbourne, FL facility, which helped ensure important safeguards were in place to protect employees and assets during and after the hurricane. Safeguards and actions taken included proactive communication to employees five days before the hurricane; the transport of vital supplies to employees and delivering fuel trucks to operate generators for mission critical systems two days before landfall; and sending first responder teams and RVs after the hurricane to help resume business operations. As a result of the Business Impact Analysis, risk handling and preparation by the Business Continuity Program, and oversight by the Enterprise Risk Management Council (ERMC), the company was prepared to safeguard the health and safety of its employees before, during and after the hurricane. The cost of response to risk is $0 because there is no additional cost in managing risks of extreme weather events as our Business Continuity Program is part of our regular course of business.

Comment
**Identifier**

**Where in the value chain does the risk driver occur?**
- Direct operations

**Risk type & Primary climate-related risk driver**
- Chronic physical
  - Changes in precipitation patterns and extreme variability in weather patterns

**Primary potential financial impact**
- Increased indirect (operating) costs

**Company-specific description**
The effects of climate change have the potential to impact the cost of utilities at our sites as cities cope with and plan for the cycles of drought, extreme heat, and flash floods which are putting a strain on natural resources and critical infrastructure. Our California sites in El Segundo, Manhattan Beach, Redondo Beach, Palmdale, and Sunnyvale, among others, account for nearly approximately 30% of both our natural gas and electricity usage and could see higher operating costs as a result of increased utility fees associated with new regulations that have recently been passed to combat these environmental changes. Furthermore, in California, water utilities are assessing drought fees on customers and adding a surcharge for users that exceed their established allocations as a way to better manage drought risks. Additionally, AB 1054 was passed in California in July of 2019. The program established by this law is designed as an insurance fund to help electric utilities cover the cost of asset damage resulting from the increasing frequency of wildfires in California. Utilities are now allowed to impose additional fees and rate increases on rate payers like our sites mentioned above and we are continuing to assess how these additional rates have impacted the operating costs at our sites.

**Time horizon**

**Likelihood**
- More likely than not

**Magnitude of impact**
- Low

**Are you able to provide a potential financial impact figure?**
- Yes, a single figure estimate

**Potential financial impact figure (currency)**
- 2,300,000

**Potential financial impact figure – minimum (currency)**
Potential financial impact figure – maximum (currency)

Explanation of financial impact figure
Estimated financial impact from increased costs is based on the company’s 2014 base year water usage and projecting an average rate increase of 4.1% per year for water over 10 years (per the DOE FEMP Annual Price Escalation Rate report from September 2017). Financial Impact= [(6.00/kgal*.041)*(934,000,000gals/1000gals)*10years]

Cost of response to risk
13,000,000

Description of response and explanation of cost calculation
Northrop Grumman’s 2020 environmental sustainability goals for greenhouse gas emissions reduction and potable water use reduction assist in managing the climate-related risks associated with increasing costs of utilities. Through these goals, we are driving operational efficiency and cost savings throughout our company, reducing energy consumption and conserving water; we are also reducing the future impacts of rising utility costs as a result of issues such as the California drought. Each year we have taken actions to implement potable water conservation projects to drive performance to our 2020 potable water use reduction goal. From 2015-2020, we implemented targeted conservation projects resulting in an estimated savings of 312 million gallons of water by investing approximately $13 million. This represents the sum of the capital costs for 146 of these projects, which we use as our cost of management. Case study: In 2019, the site in St. Augustine, FL site implemented a project to use the site’s existing cooling tower to treat contaminated groundwater that was being treated separately by a pump and treat system on site. Using the contaminated water as makeup water for the cooling tower is saving 7 million gallons of potable water per year, and cutting 15 years off of the remediation process.

Yes, a single figure estimate

Potential financial impact figure (currency)

18,000,000

Potential financial impact figure – minimum (currency)

Potential financial impact figure – maximum (currency)

Explanation of financial impact figure

The estimated financial impact represents a single example of higher compliance costs as a result of new regulations from the South Coast Air Quality Management District. We are subject to Rule 1100 for NOx concentration limits. The estimated cost represents replacement of approximately 40 boilers in our California operations at an average estimated unit cost, of $450,000. Financial Impact: 18,000,000=(450,000 boiler cost *40 # of boilers)

Cost of response to risk

1,400,000

Description of response and explanation of cost calculation
Northrop Grumman manages this risk through the company’s Environmental, Health & Safety (EHS) and Environmental Sustainability organizations. The EHS team heads the company’s efforts to provide a safe and healthy workplace for our employees and to ensure that we conduct our operations in an environmentally responsible manner and that we conduct our business activities in accordance with applicable legal requirements such as emissions regulations. To manage potential greenhouse gas emissions reporting obligations, we established the environmental sustainability program in 2008. Our current, and second, greenhouse gas emissions-reduction goal is to reduce emissions by 30% from 2010 to 2020. A positive result of this program was exceeding our 2020 goal with a 43.7% reduction in emission during the goal period. By proactively and voluntarily reducing our emissions, we are minimizing exposure to future environmental regulations from the federal government and states (e.g. AB 32) where we do business. The cost of response to risk represents the sum of the 2020 investments in emissions reductions activities that enable the company to minimize its greenhouse gas emissions and meet its 2020 reduction goal. Last year this included 33 greenhouse gas emissions reductions projects focused on energy efficiency for building services that will reduce annual emissions by approximately 2,038 MTCO2e; these projects have an average payback between 2 and 5 years.

Reduced indirect (operating) costs

**Company-specific description**

Resource efficiency, driven by Northrop Grumman’s environmental sustainability program and 2020 goals, creates an opportunity for reduced operating costs at our sites. Each year we invest in our infrastructure through energy efficiency and greenhouse gas emissions reductions projects, reducing the cost of our operations and minimizing our environmental footprint across all of our global operations. For example, we have 18 certified green buildings in our portfolio totaling more than 2.2 million square feet of floor space certified to Energy Star and LEED standards. Investments in projects such as these drove performance towards our 2020 greenhouse gas reduction goal of 30% from a 2010 base year and reduce operation costs.

**Time horizon**

- Short-term

**Likelihood**

- Virtually certain

**Magnitude of impact**

- Low

**Are you able to provide a potential financial impact figure?**

- Yes, a single figure estimate

**Potential financial impact figure (currency)**

- 3,000,000

**Potential financial impact figure – minimum (currency)**

**Potential financial impact figure – maximum (currency)**

**Explanation of financial impact figure**

The estimated financial impact represents the lifetime cost savings of the 2020 investment in greenhouse gas emissions-reductions projects which is calculated over an estimated 10-year minimum lifespan of the projects. The simple payback for these projects is averaged to be 25 years. Financial impact 3,000,000 = (300,000 annual cost savings * 10 years)

**Cost to realize opportunity**

- 1,400,000

**Strategy to realize opportunity and explanation of cost calculation**

Northrop Grumman manages this risk through the company's Environmental, Health & Safety (EHS) and Environmental Sustainability organizations. The EHS team heads the company's efforts to provide a safe and healthy workplace for our employees and to ensure that we conduct our operations in an environmentally responsible manner and in accordance with applicable legal requirements such as emissions regulations. The
environmental sustainability program was established in 2008 to manage potential greenhouse gas emissions reporting obligations.

Our current, and second, greenhouse gas emissions-reduction goal is to reduce emissions by 30% from 2010 to 2020. A positive result of this program was exceeding our 2020 goal with a 43.7% reduction in emission during the goal period. By proactively and voluntarily reducing our emissions, we are minimizing exposure to future environmental regulations from the federal government and states (e.g. AB 32) where we do business and capitalizing on efficiency opportunities. The cost to realize the opportunity represents the sum of the 2020 capital cost investments in emissions reductions activities that enable the company to minimize its greenhouse gas emissions and achieve its 2020 reduction goal. Last year this included 33 greenhouse gas emissions-reduction projects focused on energy efficiency opportunities for building services that will reduce annual emissions by approximately 2,038 MTCO2e; these projects have an average payback of 5.0 years. Examples of these projects include boiler replacements, LED lighting upgrades, building controls systems, and installations of variable frequency drives on motors and pumps. For example, a LED lighting upgrade project at our Palmdale, California facility reduced 400 MTCO2e and had a simple payback of less than 1 year.

Comment

Identifier

Opp2

Where in the value chain does the opportunity occur?

Direct operations

Opportunity type

Resource efficiency

Primary climate-related opportunity driver

Reduced water usage and consumption

Primary potential financial impact

Reduced indirect (operating) costs

Company-specific description

Resource efficiency, driven by Northrop Grumman’s environmental sustainability program and 2020 goals, creates an opportunity for reduced operating costs at our sites. Each year we invest in our infrastructure by implementing water use reduction projects, which decreases the cost of our operations and shrinks our environmental footprint across all of our global operations. For example, the 28 projects completed in 2020 are estimated to conserve 66 million gallons annually. Investments in projects
such as these drove performance to achieve our 2020 water conservation goal of 20% from a 2014 base year as well as reduce operation costs.

**Time horizon**
- Short-term

**Likelihood**
- Virtually certain

**Magnitude of impact**
- Low

**Are you able to provide a potential financial impact figure?**
- Yes, a single figure estimate

**Potential financial impact figure (currency)**
- 11,000,000

**Potential financial impact figure – minimum (currency)**

**Potential financial impact figure – maximum (currency)**

**Explanation of financial impact figure**
The estimated financial impact represents the cost savings resulting from reducing 20% water consumption over the goal period, for 10 years (estimated average lifetime of conservation project). Estimated reduction of 186 million gallons annually to meet the goal and an average cost of water of $6/kgal. Financial impacts: 11,000,000 = (186MG/1000gal*$6price/kgal)*10 years.

**Cost to realize opportunity**
- 13,000,000

**Strategy to realize opportunity and explanation of cost calculation**
Northrop Grumman’s 2020 environmental sustainability goals for greenhouse gas emissions reduction and potable water use reduction assist in managing the climate-related risks associated with increasing costs of utilities. Through these goals, we drove operational efficiency and cost savings throughout our company, reducing energy consumption and conserving water; we are also reducing the future impacts of rising utility costs as a result of issues such as the California drought. Each year we took action to implement potable water conservation projects to achieve performance to our 2020 potable water use-reduction goal. From 2015-2020, we implemented targeted conservation projects estimated to save 313 million gallons of water by investing approximately $13 million. This cost to realize the opportunities represents the sum of the capital costs for 146 of these projects. We use this figure as our cost of management. In 2020, we implemented a project at the Advanced Technologies Laboratories site, for example, that is estimated to save 41 million gallons of potable water.
water per year by treating wastewater effluent from the site and re-using it as supply water for the deionized water system.

**Identifier**

Op3

**Where in the value chain does the opportunity occur?**

Downstream

**Opportunity type**

Products and services

**Primary climate-related opportunity driver**

Shift in consumer preferences

**Primary potential financial impact**

Increased revenues resulting from increased demand for products and services

**Company-specific description**

Climate-related issues may increase demand for technologies and capabilities provided by Northrop Grumman that support environmental and weather research. Changing conditions impacting the frequency of extreme weather, movement of glaciers, and soil moisture conditions require increased monitoring and measurement. From observations to decision support, Northrop Grumman develops and operates systems and services to deliver environmental intelligence through science, sensors and enterprise services. Examples include the Global Hawk air vehicle that is being used by NASA earth science missions, sustainment services for the Air Force Weather program, the ICESat-2 satellite that measures the changing height of Earth’s glaciers, ice sheets and sea ice, and the AstroMesh-Lite(R) reflector being developed for NASA JPL’s Soil Moisture Active Passive spacecraft.

**Time horizon**

Medium-term

**Likelihood**

About as likely as not

**Magnitude of impact**

Medium-low

**Are you able to provide a potential financial impact figure?**

Yes, a single figure estimate

**Potential financial impact figure (currency)**

9,000,000
Potential financial impact figure – minimum (currency)

Potential financial impact figure – maximum (currency)

Explanation of financial impact figure
The financial impact of $9,000,000 of increased revenue represents the lowest contract value from the examples provided below. Financial impacts vary based on individual contract value. Example programs include the $300 million Air Force contract for the Systems Engineering, Management and Sustainment III, the $121 million Advanced Technology Microwave Sounder for NOAA's Joint Polar Satellite System, and the $9 million Scalable Space Inertial Reference Units for the Korea Aerospace Research Institute GEO-KOMPSAT-2 space satellite program.

Cost to realize opportunity
0

Strategy to realize opportunity and explanation of cost calculation
Northrop Grumman's business development and customer relationship management practices provide the opportunity to increase demand for climate-related technologies and capabilities. Northrop Grumman has supported NASA environmental data missions since the 1980s and our support continues to mature and evolve as NASA seeks innovative solutions for new challenges and opportunities. Through this long-standing relationship, we have worked with NASA to support their needs by providing an expanded suite of technical capabilities and supporting IT platforms, including those designed for environmental and climate monitoring. We have created demand for these types of product through press releases and by creating a dedicated page on our public website that describes our environmental and weather information solutions, capabilities, and our other initiatives that support weather and environmental science. As a result of maintaining positive customer relationship and through a focused marketing strategy, Northrop Grumman was able to extend the NASA Space Act Agreement into 2018 to continue joint use and shared cost of the Northrop Grumman-produced Global Hawk unmanned aircraft for science missions, hurricane surveillance, atmospheric research and exploration of new mission capabilities. There is no additional cost to realize the opportunity as engaging with customers to demonstrate our capabilities is part of our regular course of business.

Comment

C3. Business Strategy

C3.1

(C3.1) Have climate-related risks and opportunities influenced your organization’s strategy and/or financial planning?
Yes

**C3.1b**

(C3.1b) Does your organization intend to publish a low-carbon transition plan in the next two years?

<table>
<thead>
<tr>
<th>Intention to publish a low-carbon transition plan</th>
<th>Comment</th>
</tr>
</thead>
<tbody>
<tr>
<td>No, we do not intend to publish a low-carbon transition plan in the next two years</td>
<td></td>
</tr>
</tbody>
</table>

**C3.2**

(C3.2) Does your organization use climate-related scenario analysis to inform its strategy?

Yes, qualitative and quantitative

**C3.2a**

(C3.2a) Provide details of your organization’s use of climate-related scenario analysis.

<table>
<thead>
<tr>
<th>Climate-related scenarios and models applied</th>
<th>Details</th>
</tr>
</thead>
<tbody>
<tr>
<td>Other, please specify WWF 3% solution</td>
<td>Northrop Grumman recognizes the impacts of climate change on global stability, both near (&lt;5 years) and long-term (&gt;5 years); it is one of many macro-trends that is considered in business and product strategies, influences the future needs of our customers, and may increase demand for disaster relief and climate-monitoring systems such as the Global Hawk. Business Continuity analyzes acute physical climate change impacts within a short (&lt;1 year) and medium-term (1-5 years) time horizon. Consistent with Question 2.3a, we have operations located in regions that may be exposed to increased severity of natural disasters (e.g. coastal Florida). We use weather trends to perform quantitative analyses that includes the period of time within which operations must be recovered and the financial implications through loss of work-hours, revenue, asset values and insurance claims. We perform additional qualitative analyses to understand any reputational implications due to potential product delivery delays as a result of business disruption from natural disasters. An case study of where we integrated climate related issues into business decisions was during development of our 2020 greenhouse gas goal. The WWF 3% Solution scenario analysis was used to inform development of the corporate-wide goal as it was one of the only tools available for science-based projections in 2013 when this goal was developed. The 2020 greenhouse gas reduction of goal 30% from a 2010 base year reflects consideration of science-based climate change projections, inclusive of sources such as The 3% Solution, to ensure our reduction goal is impactful. The WWF 3% Solution calculator identified 19-24% as a the range for total percentage emissions reduction based on Northrop</td>
</tr>
</tbody>
</table>
Grumman’s base year emissions, industry classification, business unit emissions distribution/attribution and expected market share change over the goal period time horizon (2010-2020). This GHG goal is inclusive of all scope 1 and 2 emissions from our full portfolio of facilities where we have operational control and represents 98% of our global floor space. By setting an ambitious GHG target beyond what was projected by the 3% Solution, we prioritized large scale efficiency projects, such as boiler replacements, at our operations and invested in renewable energy installations, like onsite solar, that have enabled us to surpass our GHG emissions reduction goal well before the end of the goal period.

### C3.3

(C3.3) Describe where and how climate-related risks and opportunities have influenced your strategy.

<table>
<thead>
<tr>
<th>Have climate-related risks and opportunities influenced your strategy in this area?</th>
<th>Description of influence</th>
</tr>
</thead>
<tbody>
<tr>
<td>Products and services</td>
<td>Yes</td>
</tr>
<tr>
<td></td>
<td>Climate-related issues may increase demand by our customers for technologies and capabilities provided by Northrop Grumman that support environmental and weather research. From observations to decision support, Northrop Grumman has made the strategic business decision to develop and operate systems and services to deliver environmental intelligence through science, sensors and enterprise services. The time horizon for these activities is ongoing (short-, medium-, and long-term as specified in C2.1a). Northrop Grumman provides an array of products that support climate and earth monitoring activities being completed by our customers. The data acquired from the systems we develop provide important information that is required to better understand the Earth’s changing climate. The continued need for these systems provides further opportunity to leverage Northrop Grumman capabilities (Opportunity #3) which we have used to meet demand and support the needs of our customers. For example, the JPSS-1 satellite was launched carrying two Northrop Grumman-developed sensors that monitor atmospheric data and the NASA Global Hawk developed by Northrop Grumman is used for various climate monitoring missions. As a result, our technology has supported customers in the monitoring of hurricanes as well as aided in disaster relief efforts.</td>
</tr>
</tbody>
</table>
| Supply chain and/or value chain | Yes | Climate/natural disaster issues are one of many characteristics integrated into our Global Supply Chain Risk Management strategy. We have a committee that meets monthly to identify, assess and monitor medium-term (1 to 5 years) supply chain risks across the enterprise in order to manage issues on an ongoing basis. Our strategy is influenced by the fact that our suppliers and subcontractors are subject to natural and environmental disasters that could affect their performance to our contracts and ultimately impact our operations. As an example, when a Climate/natural disaster supply chain risk has been identified (i.e. hurricanes, wildfires), our committee assesses for probability of supply chain disruption as well as severity of impact to our business operations and programs. Detailed mitigation plans are established at the local or enterprise level, in collaboration with our internal stakeholders and suppliers as appropriate. 

Case study: During Hurricane Irma, our facilities in Melbourne and St. Augustine experienced availability and delivery issues for diesel fuel required to power emergency generators as a result of limited supply, high-demand and damaged infrastructure caused by the storm. A decision based on our risk mitigation strategy included leveraging our geographically diverse supply base in order to coordinate alternative sources of supply from outside of the impacted area in order to continue operational continuity of our facilities. |
| Investment in R&D | No | Climate-related risks and opportunities have not directly impacted our investment in R&D due to the nature of our business. Our products and services are designed to meet contractual requirements of our customers, primarily the U.S. Government and principally the Department of Defense and intelligence community. Company-sponsored R&D investment strategy includes significant investment to support future technologies and mission solutions primarily related to government programs. |
| Operations | Yes | Our business is subject to disruption caused by natural and/or environmental disasters that could adversely affect our profitability and overall financial position. Therefore, we use the Business Impact Analysis, performed annually, as part of our strategy to assess the potential size and scope of climate-related risks posed to our operations, to prioritize recovery order of sites and business processes, and to identify gaps in recoverability. We have significant |
operations located in regions that may be exposed to hurricanes and other damaging storms and natural disasters. For example, Hurricanes Irma and Maria impacted our St. Augustine, Florida and Melbourne, Florida operations and resulted in employee evacuations, lost work-hours, and limited infrastructure damage. During annual planning for these events, our robust Business Continuity Program, as described in 2.2, deploys an array of preventative and active measures that help to mitigate and adapt to impacts from natural and/or environmental disasters on our employees, operations, and physical infrastructure. Furthermore, we consider these risks in our new building design and construction. Mitigation efforts during the construction of the new Building 100 at our St. Augustine, Florida site required additional investment to incorporate the capability to withstand an ultimate wind speed of 130 mph into the building structure design and the roof-mounted, integrated solar panels.

We are also aware that policy and legal risks such as climate-related regulations could have a material adverse effect on our reputation and our financial position, results of operations, and/or cash flows. We have implemented greenhouse gas, water and waste reduction goals from 2010-2020 to anticipate these risks, and we are also implementing additional strategies in parallel. Case Study: A substantial business decision made as a result of integration of climate-related issues, specifically related to greenhouse gas emissions reductions, was the decision to look beyond just our 2020 goals and minimize our impact to the environment as our operations expand. This is being accomplished through investing in LEED certification for new construction to ensure our business operations minimize greenhouse gas emissions, water use, and solid waste generation. In 2020, one LEED building in Linthicum, MD was added to our inventory.

C3.4

(C3.4) Describe where and how climate-related risks and opportunities have influenced your financial planning.

<table>
<thead>
<tr>
<th>Financial planning elements that have been influenced</th>
<th>Description of influence</th>
</tr>
</thead>
</table>

26
<table>
<thead>
<tr>
<th>Row 1</th>
<th>Revenues</th>
<th>Indirect costs</th>
<th>Capital expenditures</th>
<th>Assets</th>
</tr>
</thead>
</table>

Our business is subject to disruption caused by natural and/or environmental disasters that could adversely affect our revenues, indirect costs, profitability, assets and our overall financial position. We have significant operations located in regions that may be exposed to hurricanes and other damaging storms and natural disasters such as our St. Augustine, Florida and Melbourne, Florida sites. Our subcontractors and suppliers are also subject to natural and environmental disasters that could affect their ability to deliver or perform under a contract. Although preventative measures may help to mitigate damage, the damage and disruption resulting from natural and environmental disasters may be significant. If insurance or other risk-transfer mechanisms are unavailable or insufficient to recover all costs or if we experience a significant disruption to our business due to a natural or environmental disaster, the magnitude of the impact could be a material adverse effect on our financial position, results of operations and/or cash flows. On an annual basis, our Business Continuity program analyzes acute physical climate-related issues and uses weather trends to perform quantitative analyses that include financial implications of business disruption from natural disasters. This analysis drives various risk management programs to be implemented across the company. As described in C2.3a Risk #1, proactive assessments and planning for Hurricane Irma resulted in a low impact on our Melbourne, Florida operations.

As outlined in C2.4a Opportunities #1 and #2, Northrop Grumman drives resource efficiency through capital expenditures required to achieve environmental sustainability program goals and objectives as well as to reduce operating costs. This includes expenditures for energy efficiency, LEED certified buildings, onsite renewable energy systems, water conservation, and solid waste diversion. In 2020, we completed 33 GHG emissions reduction projects, focused on energy efficiency, that will reduce annual emissions by approximately 2,038 MTCO2e and have an average payback of 4.6 years. In addition, 18 of our buildings, representing 2.2 million sq. ft. of the company’s footprint have received a LEED or Energy Star rating.

**C3.4a**

**(C3.4a) Provide any additional information on how climate-related risks and opportunities have influenced your strategy and financial planning (optional).**

Northrop Grumman’s environmental sustainability program was established in 2008 in response to the growing stakeholder expectations surrounding environmental sustainability including climate and greenhouse gas emissions, water conservation, and solid waste management. To ensure integration into the business and business strategy, environmental sustainability and specifically greenhouse gas emissions reductions projects, were established as one of the Company’s six non-financial performance metrics that influence compensation for...
executives and eligible employees. The Board of Directors Policy Committee has oversight of the environmental sustainability program and is updated annually on the environmental sustainability program, 2020 goal performance, and stakeholder-engagement activities. The company’s current 2020 environmental sustainability goals for 30% greenhouse gas emissions reductions from 2010, 20% potable water use reduction from 2014, and 70% solid waste diversion from landfill continue our commitment to addressing climate-related issues.

• We have operations located in regions that may be exposed to hurricanes and other damaging storms and natural disasters (e.g. coastal Florida). Our Business Continuity program analyzes acute physical climate-related issues and uses weather trends to perform quantitative analyses that include financial implications of business disruption from natural disasters. This analysis drives various risk management programs to be implemented across the company. Climate-related issues also have an impact on global stability, both near and long-term. It is one of many macro-trends that are considered in business strategies as an influencer on the future needs of our customers and may increase demand for some Northrop Grumman capabilities and products such as the Global Hawk that can be used for disaster relief efforts and climate monitoring.

• The company’s strategy includes our 2020 environmental sustainability goals for greenhouse gas emissions reductions of 30% from a 2010 base year.

• A substantial business decision made as a result of integration of climate-related issues, specifically related to the aspect of greenhouse gas emissions reductions, was the decision to look beyond just our 2020 goals and minimize our impact to the environment as our operations expand. This is being accomplished through investing in LEED certification for new construction to ensure our business operations minimize greenhouse gas emissions, water use, and solid waste generation.

This figure is a restatement due to the historical data correction process capturing a more complete annual inventory for RY2017.

C6.4

(C6.4) Are there any sources (e.g. facilities, specific GHGs, activities, geographies, etc.) of Scope 1 and Scope 2 emissions that are within your selected reporting boundary which are not included in your disclosure?

Yes

C6.4a

(C6.4a) Provide details of the sources of Scope 1 and Scope 2 emissions that are within your selected reporting boundary which are not included in your disclosure.

Source
Mobile emissions for small fleets (<10 vehicles)
Relevance of Scope 1 emissions from this source
Emissions are not relevant

Relevance of location-based Scope 2 emissions from this source
No emissions excluded

Relevance of market-based Scope 2 emissions from this source (if applicable)
No emissions excluded

Explain why this source is excluded
Fuel consumption (diesel, gasoline and propane) for all reporting sites comprises 0.64% of the baseline total inventory. Therefore, it was concluded that emissions associated with sites that have fewer than 10 vehicles are immaterial to the GHG inventory. This category is continuously monitored and was reflected in the NGC GHG inventory that received limited assurance through third party verification.

Source
Non-utility fuel data for sites less than 100,000 square feet

Relevance of Scope 1 emissions from this source
Emissions are not relevant

Relevance of location-based Scope 2 emissions from this source
No emissions excluded

Relevance of market-based Scope 2 emissions from this source (if applicable)
No emissions excluded

Explain why this source is excluded
For sites less than 100,000 square feet, fuel deliveries that are not utility based (e.g., natural gas and propane) are excluded because they are not common at Northrop Grumman and are immaterial to the baseline inventory. This category is continuously monitored and was reflected in the NGC GHG inventory that received limited assurance through third party verification.

Source
Process emissions excluded for buildings less than 100,000 square feet

Relevance of Scope 1 emissions from this source
Emissions are not relevant

Relevance of location-based Scope 2 emissions from this source
No emissions excluded

Relevance of market-based Scope 2 emissions from this source (if applicable)
No emissions excluded
Explain why this source is excluded
A majority of manufacturing and testing is performed at the Northrop Grumman sites and campuses that are greater than 100,000 sq.ft. The majority of buildings in the Northrop Grumman real estate portfolio that are less than 100,000 sq. ft are used primarily as office space and not for manufacturing operations. Thus, any process emissions related to operations in these sites are considered immaterial. This category is continuously monitored and was reflected in the NGC GHG inventory that received limited assurance through third party verification.

Source
Refrigerant emissions of HFCs

Relevance of Scope 1 emissions from this source
Emissions are not relevant

Relevance of location-based Scope 2 emissions from this source
No emissions excluded

Relevance of market-based Scope 2 emissions from this source (if applicable)
No emissions excluded

Explain why this source is excluded
Baseline assessments of refrigerant (HFC) emissions were made for both processes (e.g. thermal chambers) and fugitive (e.g. facility HVAC equipment) and were considered immaterial to the inventory. This was reassessed in 2012 and immateriality threshold is still met. This category is continuously monitored and was reflected in the NGC GHG inventory that received limited assurance through third party verification.

Source
Emissions of PFCs from fire suppression systems

Relevance of Scope 1 emissions from this source
Emissions are not relevant

Relevance of location-based Scope 2 emissions from this source
No emissions excluded

Relevance of market-based Scope 2 emissions from this source (if applicable)
No emissions excluded

Explain why this source is excluded
Northrop Grumman tracks fire suppression system leaks and releases. In our baseline year, releases accounted for less than 0.05 percent of the GHG inventory and were deemed immaterial to the inventory. This category is continuously monitored and was reflected in the NGC GHG inventory that received limited assurance through third party verification.
**C6.5**

(C6.5) Account for your organization’s gross global Scope 3 emissions, disclosing and explaining any exclusions.

### Purchased goods and services

<table>
<thead>

### Fuel-and-energy-related activities (not included in Scope 1 or 2)

<table>
<thead>
<tr>
<th>Evaluation status</th>
<th>Relevant, calculated</th>
</tr>
</thead>
<tbody>
<tr>
<td>Metric tonnes CO2e</td>
<td>23,185</td>
</tr>
</tbody>
</table>

**Emissions calculation methodology**

Northrop Grumman calculated metric tonnes of CO2e due to distribution loss using the average U.S. nation-wide loss provided by the EIA ([https://www.epa.gov/energy/emissions-generation-resource-integrated-database-egrid-questions-and-answers](https://www.epa.gov/energy/emissions-generation-resource-integrated-database-egrid-questions-and-answers)). The nation-wide loss was approximately 7.96%. Based on Northrop Grumman’s purchased electricity for 2020 (1,069,438.52 MWh), we calculated the amount of electricity that would have been needed to deliver those kWh taking into consideration a 7.96% loss. We then calculated the kWh that were lost during distribution and applied the eGRID 2019 U.S. average emission factor of 889.35 lb/kWh CO2e, which resulted in 23,185 metric tonnes of CO2e due to transmission and distribution loss.

**Percentage of emissions calculated using data obtained from suppliers or value chain partners**

| 0 |

**Please explain**

The primary kWh data used by Northrop Grumman comes from bill pay IT system. However, a 5.10% assumed distribution loss comes from EIA. Therefore, stating 0% of data comes from suppliers or value chain partner.
Upstream transportation and distribution

Evaluation status
Relevant, calculated

Metric tonnes CO2e
768,411

Emissions calculation methodology
Northrop Grumman is an EPA SmartWay partner and utilizes ground shipment data collected, managed and provided by our partner logistics organization. The primary domestic shipment and mileage data is tracked through our partner’s FBAP. The GWPs are consistent with our Scope 1 and Scope 2 emissions inventory and come from the IPCC Fourth Assessment Report (AR4). Our logistics partner applies the SmartWay program’s emission factors based on classification of each carrier and mode type to the primary mileage data per shipment. Approximately 99.8% of the emissions reported in this category are covered by SmartWay carrier partners.

Percentage of emissions calculated using data obtained from suppliers or value chain partners
100

Please explain
Northrop Grumman’s domestic shipments are all tracked and managed through our logistics partner’s FBAP. Shipments and mileage made by SmartWay carriers and nonSmartWay carriers are consolidated in the FBAP and EPA SmartWay standard emission factors (g/mile) are applied to generate a total inventory.

Waste generated in operations

Evaluation status
Relevant, calculated

Metric tonnes CO2e
2,125

Emissions calculation methodology
Northrop Grumman auditable sites track their annual waste by category (commodity, product, unit, etc.) and by management method. Northrop Grumman waste categories were mapped to corresponding categories using the EPA WARM model, which generates emissions in MTCO2e for each material category and management method. The reported emissions represent the actual waste data collected that was sent to landfill in 2020 as calculated by the EPA WARM model.

Percentage of emissions calculated using data obtained from suppliers or value chain partners
83

Please explain
The primary data collected comes from waste hauler-provided receipts demonstrating actual tonnage and the remainder is estimated based on applying a standard factor to facility headcount.

**Business travel**

**Evaluation status**
Relevant, calculated

**Metric tonnes CO2e**
62,388

**Emissions calculation methodology**
All activity data related to business travel is provided by Northrop Grumman's central travel management system. Activity data include number of hotel nights booked, rental car miles travelled and emissions, train miles travelled, and number of air miles travelled. The emissions from air travel and train travel are calculated using emission factors from the U.S. EPA Center for Corporate Climate Leadership GHG Emission Factors Hub. Emissions from hotel stays are calculated using the respective emission factor from Carbon Fund. Emissions from car rentals are provided by the central travel management system. The GWPs are consistent with our Scope 1 and Scope 2 emissions inventory and come from the IPCC Fourth Assessment Report. The GHG inventory for business travel achieved Limited Assurance via Third Party Verification from LRQA America’s Sustainability, Inc.

**Percentage of emissions calculated using data obtained from suppliers or value chain partners**
99

**Please explain**
A portion of emissions from car rentals are extrapolated based on spend data.

**Employee commuting**

**Evaluation status**
Relevant, calculated

**Metric tonnes CO2e**
253,358

**Emissions calculation methodology**
Employee commuting accounts for the emissions associated with Northrop Grumman employee commutes to/from work. The GWPs are consistent with our Scope 1 and Scope 2 emissions inventory and come from the IPCC Fourth Assessment Report. The emissions are calculated using emission factors from the U.S. EPA Center for Corporate Climate Leadership GHG Emission Factors Hub. Employee headcount is primary data from the Annual Report (10K) filing. Estimating factors and averages are used from reputable public sources (e.g., EPA). Each business sector provides an average vehicle ridership (AVR) value for the sector. If not available, an average is used. The AVR value
is multiplied by the number of employees per sector and an average fuel economy; it is then multiplied by the emission factor for the total commuting emissions.

**Percentage of emissions calculated using data obtained from suppliers or value chain partners**

6.5

**Please explain**

National averages for commute miles to work, MPG, and AVR are used to calculate employee commuting emissions. Approximately 6.5% of our data is considered actual data from value chain because it is reported through compliance mechanisms. This does not account for virtual workforce due to Covid during the calendar, so emissions may be lower than reported for this category.

**Upstream leased assets**

**Evaluation status**

Not relevant, explanation provided

**Please explain**

Northrop Grumman reports emissions from leased spaces as part of Scope 1 and Scope 2 inventories since we consider leased space within our operational control. Therefore, we do not have additional emissions to report as part of this Scope 3 category.

**Downstream transportation and distribution**

**Evaluation status**

Not relevant, explanation provided

**Please explain**

According to the Voluntary GHG Reporting Guidance for the Aerospace Industry (IAEG, 2016), downstream transportation and distribution emissions are most often captured in a customer's Scope 1 emissions or are more appropriately quantified in Scope 3 Category 4. Therefore, Category 9 is irrelevant to the aerospace industry. The International Aerospace Environmental Group (IAEG) is a non-profit organization of global aerospace companies created to collaborate on and share environmental solutions for the industry.

**Processing of sold products**

**Evaluation status**

Not relevant, explanation provided

**Please explain**

Products and services provided by Northrop Grumman do not require further processing, transformation or inclusion in another product before use by the end consumer. This status is a function of Northrop Grumman's role as a prime contractor to
the U.S. and allied governments. Where Northrop Grumman is a supplier to another prime contractor, post-processing is minimal and considered immaterial.

**Use of sold products**

**Evaluation status**
Relevant, not yet calculated

**Please explain**
Not Applicable.

**End of life treatment of sold products**

**Evaluation status**
Not relevant, explanation provided

**Please explain**
Northrop Grumman’s customer base is primarily the U.S. Government, principally the Department of Defense and intelligence community. We also conduct business with foreign, state and local governments, as well as commercial customers. Our products and services are designed to meet contractual requirements of our customers. Products are sold to government customers who take formal possession of the product. Customers have their own property disposition process for owned-property, especially products used for military and defense operations. Due to the nature of our business and customer requirements, Northrop Grumman believes that “not relevant, explanation provided” is the most appropriate available response.

**Downstream leased assets**

**Evaluation status**
Not relevant, calculated

**Metric tonnes CO2e**
1,476

**Emissions calculation methodology**
As of December 2020, Northrop Grumman had approximately 51 million square feet of floor space of which approximately 189,000 square feet were leased to third parties. By multiplying the average MWh/sq ft, we derived electricity usage for the facilities Northrop Grumman leases to third parties. Using the U.S. national average CO2e emission factor from eGRID2018, we calculated GHG emissions from downstream leased assets.

**Percentage of emissions calculated using data obtained from suppliers or value chain partners**

**Please explain**
Emissions for this category are immaterial. As of December 2020, Northrop Grumman had approximately 51 million square feet of floor space, of which approximately 189,000
square feet was leased to third parties. Source: 2020-Annual-Report-Northrop-Grumman.pdf (northropgrumman.com) (p22)

**Franchises**

**Evaluation status**
Not relevant, explanation provided

**Please explain**
Northrop Grumman does not own or operate franchises.

**Investments**

**Evaluation status**
Not relevant, explanation provided

**Please explain**
Northrop Grumman is not a financial institution or financial services organization. Therefore, in accordance with the WRI Scope 3 Protocol, this category of emissions is not relevant to Northrop Grumman.

**C6.7**

**(C6.7) Are carbon dioxide emissions from biogenic carbon relevant to your organization?**

No
C6.10

(C6.10) Describe your gross global combined Scope 1 and 2 emissions for the reporting year in metric tons CO2e per unit currency total revenue and provide any additional intensity metrics that are appropriate to your business operations.

Intensity figure
0.00005282

Metric numerator (Gross global combined Scope 1 and 2 emissions, metric tons CO2e)
423,668

Metric denominator
unit total revenue

Metric denominator: Unit total
27,722,000,000

Scope 2 figure used
Location-based

% change from previous year
12.66

Direction of change
Decreased

Reason for change
Implemented in 2020 a wide range of emissions-reduction activities including building and process efficiency projects, such as multiple lighting upgrades resulting in approximately 869 MTCO2e savings and process to reduce solvent use that resulted in approximately 89 MTCO2e. The 2019 gross combined Scope 1 and 2 emissions have been adjusted since RY 2019 for increased accuracy and completeness, and that figure is 485,060 MTCO2e. The company's 2019 revenue was used to calculate the 2020 intensity figure because energy and greenhouse gas emissions data excludes Orbital ATK through year-end 2020. The company's 2020 revenue data is inclusive of Orbital ATK and cannot be separated out; thus accurate intensity figures for energy and greenhouse gas emissions cannot be calculated.
423,668

**Metric denominator**
square foot

**Metric denominator: Unit total**
35,483

**Scope 2 figure used**
Location-based

**% change from previous year**
13.07

**Direction of change**
Decreased

**Reason for change**
Implemented in 2020 a wide range of emissions-reduction activities including building and process efficiency projects. Square footage represents owned and leased square footage and excludes subleased space as reported in the Annual Report, as well as square footage owned or leased by the Innovation Systems sector, which is outside the current goal period boundary.

<td>7.96</td>
</tr>
</tbody>
</table>

Please explain
Northrop Grumman purchased fewer MWh of electricity delivered from the grid in 2020 (1,069,439 MWh) than in 2019 (1,080,209 MWh). Emissions from this category are derived from Transmission & Distribution loss associated with electricity delivered from the grid, and fewer MWh purchased from the grid also reduces the associated emissions corresponding from grid delivery. Furthermore, another contributing factor is that the nation-wide loss factor provided by the Energy Information Agency increased from 4.87 to 5.10 demonstrating less efficiency in electricity delivery.

Upstream transportation and distribution
Direction of change
  Decreased

Primary reason for change
  Other, please specify
  Change in data accuracy

Change in emissions in this category (metric tons CO2e)
  339,634

% change in emissions in this category
  30.65

Please explain
  Prior to 2019, upstream shipping and transportation data was provided through 2 sources. Approximately 30% of the total emissions reported in previous years was derived from applying an estimated emission factor to total number of shipments based on an estimated average mileage per shipment factor, whereas 70% of the total emissions from our logistics partner's FBAP was calculated based on EPA SmartWay categorization of carriers, actual mileage, and emission factors. This year we have consolidated all shipment tracking within a single data source and, as a result, have significantly increased our data quality and limited the assumptions applied to the primary data. As such, we have an increased inventory in this category, but the data is much more accurate.

Waste generated in operations

Direction of change
  Decreased

Primary reason for change
  Other emissions reduction activities

Change in emissions in this category (metric tons CO2e)
  700

% change in emissions in this category
  24.78

Please explain
  Waste diversion strategies have resulted in fewer tons of material being sent to landfill, thus generating fewer emissions from decomposition in landfill.

Business travel

Direction of change
  Decreased

Primary reason for change
  Other, please specify
Decrease in Activity

**Change in emissions in this category (metric tons CO2e)**

103,401

**% change in emissions in this category**

62.37

**Please explain**

There was a significant decrease in business travel in 2020 due to COVID-19 pandemic related travel restrictions imposed by Northrop Grumman to promote a commitment to employee health and to support efforts to limit spread of the virus. In addition, 2020 business travel data is inclusive of legacy Orbital ATK data. The company migrated legacy Orbital ATK into the Northrop Grumman business travel system, and we are unable to separate heritage NGC data from Orbital ATK data for 2020. Orbital ATK data will be completely included in Northrop Grumman’s environmental goals and metrics starting in the 2021 reporting year.

**Employee commuting**

**Direction of change**

Increased

**Primary reason for change**

Other, please specify

Change proportion commuting and shorter commute time

**Change in emissions in this category (metric tons CO2e)**

80,578

**% change in emissions in this category**

46.64

**Please explain**

Total emissions from employee commuting increased over last year as we use the national averages for commute miles to work, MPG, and AVR to calculate employee commuting emissions. Approximately 6.5% of our data is considered actual data from value chain because it is reported through compliance mechanisms. In 2020, changes to our reporting systems prevent exclusion of Orbital ATK employee commuting as was possible in 2019, which could contribute to additional emissions reported this year. In addition, reported emissions for this category may be higher than actuals because we did not discount for virtual workforce due to Covid during the calendar year.

**Downstream leased assets**

**Direction of change**

Increased

**Primary reason for change**

Other, please specify
Increase in downstream leased square footage

Change in emissions in this category (metric tons CO2e)
158

% change in emissions in this category
11.9

Please explain
Emissions in this category are directly tied to square footage leased to a third party by the company. We have increased our subleased square footage from 169,000 square feet in 2019 to 189,000 square feet in 2020.

C8. Energy

<td></td>
</tr>
</tbody>
</table>
% change from previous year
48.6

Direction of change
Increased

Please explain
Our 2020 potable water use reduction goal of 20% is managed as an absolute reduction target, therefore the metric provided is reduction against our baseline year 2014 potable water use. In RY2020, we are reporting a 20.0% reduction of potable water use (gallons), whereas in RY2019 after data correction for accuracy we are reporting a 10.2% reduction against the baseline. Therefore, we have achieved a 48.6% improvement this year \((\frac{20.0-10.2}{20.0} = 48.6\%)\).

Rationale for the coverage of your engagement
This engagement focuses on our domestic shipping and logistics suppliers. Northrop Grumman is an EPA SmartWay Transport Partner and strives to leverage SmartWay certified carriers for US domestic ground shipments as these partners have committed to demonstrating improvements in efficiency and reporting emissions metrics. The SmartWay program also provides supplier emissions data that supports internal benchmarking and informs our supplier selection process.

Impact of engagement, including measures of success
Northrop Grumman leverages the EPA SmartWay program to select shipping and logistics suppliers who have committed to the carrier partner program. SmartWay carrier partners commit to providing documented emissions metrics, demonstrating efficiency improvements and optimizing fuel economy. Northrop Grumman prioritizes selection of SmartWay carrier partners, and we have seen measured success with this engagement as about 99.8% of our U.S. domestic ground shipments are completed by SmartWay carrier companies. By incentivizing SmartWay partners, Northrop Grumman is prioritizing suppliers committed to lowering emissions as a best practice. The impact of the engagement with SmartWay shipping carriers can be quantified by the average CO2/mile versus that of non-SmartWay carriers, based on supplier emission factors provided by the EPA. In 2020, the SmartWay carriers averaged approximately 0.00145 tons CO2/mile, whereas the non-SmartWay carriers averaged 0.00244 tons CO2/mile; this results in a 40% reduction in greenhouse gas emissions per mile by selecting SmartWay carrier partners.

C12.1b

(C12.1b) Give details of your climate-related engagement strategy with your customers.

<table>
<thead>
<tr>
<th>Type of engagement</th>
<th>Details of engagement</th>
</tr>
</thead>
<tbody>
<tr>
<td>Education/information sharing</td>
<td>Run an engagement campaign to education customers about your climate change performance and strategy</td>
</tr>
</tbody>
</table>

% of customers by number
84

% of customer-related Scope 3 emissions as reported in C6.5
0
Please explain the rationale for selecting this group of customers and scope of engagement

As stated in our annual report, 84% of our sales are to the U.S. government, and as such, we engage significantly with them on a variety of environment-related topics including climate. Recent climate-related engagement activities with the U.S. Government include responding to the General Services Administration request to disclose climate-related activity via the CDP Supply Chain Program and responding to the Council on Environmental Quality's Federal Supplier Greenhouse Gas Management Scorecard. These activities enable our customers to better understand our environmental sustainability performance and the climate-related programs we have developed.

Impact of engagement, including measures of success

We measure customer engagement to help understand our impact. Contributing in these climate-related requests has been impactful because it has enabled us to engage with 84% (based on sales) of our customer base. Another way we measured the success and impact of this engagement is based on the rating we receive on the Council on Environmental Quality's Federal Supplier Greenhouse Gas Management Scorecard. As an example of this impact, we earned a green rating on the 2016 scorecard in all three categories of emissions disclosure, targets, and climate risk.

C12.1d

(C12.1d) Give details of your climate-related engagement strategy with other partners in the value chain.

Our methods for engagement with partners include membership-based involvement with non-profit organizations. For example, Northrop Grumman is a founding member of the International Aerospace Environmental Group (IAEG), which was formed to develop collaborative approaches for global aerospace companies in the realm of environmental compliance and sustainability. Our strategy is to engage with partners is to leverage groups or organizations that provide added value to our business. For example, IAEG member companies recognized that there was no aerospace and defense specific guidance for reporting on Scope 3 categories, but that it was needed. Through collaboration with our peers in the GHG Management and Reporting Workgroup #3, IAEG has developed GHG Reporting Guidance for the Aerospace Industry, a supplement to the GHG Protocol. The measure of success for this partner engagement is collaboration in development and adoption of the Guidance as well as the improvement in consistency in GHG emissions reporting within the aerospace industry.

C12.3

C12.3b

(C12.3b) Are you on the board of any trade associations or do you provide funding beyond membership?

Yes

C12.3c

(C12.3c) Enter the details of those trade associations that are likely to take a position on climate change legislation.

Trade association
Business Roundtable

Is your position on climate change consistent with theirs?
Consistent

Please explain the trade association’s position
The Business Roundtable believes, as stated on its website that steps to address the risks of global warming are prudent and supports collective actions that will lead to the reduction of greenhouse gas emissions on a global basis. It also believes that harnessing America’s abundant renewable energy resources in a cost-effective manner diversifies U.S. energy supplies, enhances U.S. energy security and advances environmental stewardship. Business Roundtable CEOs are committed to sustainability.
and making life better in the communities in which their companies operate, while also creating greater prosperity by driving economic growth and job creation.

**How have you influenced, or are you attempting to influence their position?**

Northrop Grumman actively participates in the Business Roundtable. In particular, we engage in conversations around the subject of climate change and other environmental priorities. In 2020, the Business Roundtable released new principles and policies on climate change, which, among other topics, address topics such as carbon pricing, science-aligned emissions reduction targets, and calling on businesses and government to limit global temperature rise in alignment with the Paris Agreement.

---

**Trade association**

International Aerospace Environmental Group

**Is your position on climate change consistent with theirs?**

Consistent

**Please explain the trade association’s position**

IAEG™ is a non-profit corporation comprised of a global group of aerospace companies, established to facilitate harmonization of compliance amongst Aerospace Companies and their supply chains with the existing and emerging laws and regulations protecting human health and the environment. As a non-lobbying organization (as defined in the by-laws), IAEG™ seeks to achieve its objectives by promoting the development of voluntary consensus standards published by an independent standards organization harmonizing environmental requirements applicable to aerospace companies. For example, the IAEG GHG work group identified the need to develop a voluntary consensus standard for GHG Reporting, to drive common and consistent GHG reporting across aerospace companies and their suppliers, to promote improved accounting and accountability for GHG emissions reductions.

**How have you influenced, or are you attempting to influence their position?**

Engagement: Northrop Grumman is a founding Board member of IAEG and actively engaged in the organization’s governance, strategy and objectives. Northrop Grumman representatives at the Board and Work Group levels provide strategic direction and practical solutions for achieving the goals of the organization and the work groups.

---

**Trade association**

Aerospace Industries Association

**Is your position on climate change consistent with theirs?**

Consistent

**Please explain the trade association’s position**

The Aerospace Industries Association (AIA), founded in 1919 only a few years after the birth of flight, is a trade association representing major aerospace and defense
manufacturers and suppliers in the United States. AIA was one of four industry groups to write a collective statement on fuel efficiency and carbon dioxide (CO2) emissions to clarify that the International Civil Aviation Organization goals involve participation by the whole aviation sector using a broad array of measures, not just aircraft technology.

**How have you influenced, or are you attempting to influence their position?**

Northrop Grumman participates in the AIA Committee on the Environment.

**C12.3e (C12.3e) Provide details of the other engagement activities that you undertake.**

Northrop Grumman is a member of the Conservation International (CI) Business Sustainability Council (BSC). The BSC is a forum for corporate leaders taking positive environmental actions in their businesses and provides members a blend of CI thought leadership and science, practical experience from the field, and shared best practices across corporations and cultures. BSC offers members an annual meeting for collaboration amongst members, online learning and employee engagement tools, and technical and advisory support. Conservation International informs policy development by serving as a trusted advisor to local, regional and national governments around the world. CI data, methods and tools assist governments in understanding the value of oceans, forests, croplands, water supplies and wildlife populations, and help to inform actions necessary to protect these vital natural resources.

**C12.3f (C12.3f) What processes do you have in place to ensure that all of your direct and indirect activities that influence policy are consistent with your overall climate change strategy?**

Northrop Grumman ensures consistency of strategy through collaboration and regular updates with leadership and stakeholder engagement groups within our organization including the Vice Presidents of Operations/Quality (Environmental Sustainability Executive Sponsors), Environmental, Health and Safety Leadership Committee (ELC), the Facilities Working Group (FWG), Government Relations, and Communications. Government Relations monitors and tracks state legislation, regulations, and local government ordinances related to environmental policy development and provides regular updates and guidance through facility operations management team meetings to ensure that Northrop Grumman can adhere to regulations and policies. Government Relations also engages with environmental stakeholders of sector EHS teams to share knowledge and ideas on how best to manage environmental regulation and policy development as part of our larger public and private partnerships. The environmental sustainability program also tracks environmental policy developments and regularly engages with the Government Relations organization in organized quarterly and monthly meetings. These meetings provide the environmental sustainability program with further insights into local and state policy activities and also provide the Government Relations team a go-to resource for environmental sustainability topics. Environmental technical experts also maintain regular communication with Northrop Grumman representatives serving within industry groups to ensure the activities are consistent with the company’s strategy.
C12.4

(C12.4) Have you published information about your organization's response to climate change and GHG emissions performance for this reporting year in places other than in your CDP response? If so, please attach the publication(s).

SC. Supply chain module

SC0.0

(SC0.0) If you would like to do so, please provide a separate introduction to this module.

Northrop Grumman Corporation is a publicly owned company whose common stock is listed on the New York Stock Exchange (NYSE: NOC). Northrop Grumman is a leading global aerospace and defense company. We use our broad portfolio of capabilities and technologies to create and deliver innovative platforms, systems and solutions in space; manned and autonomous airborne systems; including strike; strategic deterrence systems; hypersonic; missile defense; weapons systems; cyber; command, control, communications and computers, intelligence, surveillance and reconnaissance (C4ISR); and logistics and modernization. We participate in many high-priority defense and government programs in the United States and globally. We conduct most of our business with the U.S. Government, principally the Department of Defense (DoD) and intelligence community. We also conduct business with foreign, state and local governments and commercial customers. Northrop Grumman established its environmental sustainability program in 2008 to reduce the company’s environmental footprint by improving operational efficiency and integrating environmental sustainability practices into all our operations. Our Environmental Sustainability Program strives to expand environmental sustainability awareness throughout our organization, supporting our corporate values and meeting the expectations of our diverse set of stakeholders. This program is a catalyst for environmentally sustainable performance that drives long-term affordability into our operations, benefiting our customers as well as our shareholders. Northrop Grumman has committed to the following 2020 environmental sustainability goals: a 30% reduction in absolute GHG emissions from 2010 levels, a 20% reduction in potable water use from 2014, and a 70% solid waste diversion rate from landfill. All quantitative data in this response represents Northrop Grumman prior to the acquisition of Orbital ATK.

SC0.1

(SC0.1) What is your company’s annual revenue for the stated reporting period?

| Row 1 | 36,799,000,000 |

SC0.2

(SC0.2) Do you have an ISIN for your company that you would be willing to share with CDP?

Yes

SC0.2a

(SC0.2a) Please use the table below to share your ISIN.
<table>
<thead>
<tr>
<th>ISIN country code (2 letters)</th>
<th>ISIN numeric identifier and single check digit (10 numbers overall)</th>
</tr>
</thead>

</table>

**SC1.1**

(SC1.1) Allocate your emissions to your customers listed below according to the goods or services you have sold them in this reporting period.

**SC1.2**

(SC1.2) Where published information has been used in completing SC1.1, please provide a reference(s).

**SC1.3**

(SC1.3) What are the challenges in allocating emissions to different customers, and what would help you to overcome these challenges?

<table>
<thead>
<tr>
<th>Allocation challenges</th>
<th>Please explain what would help you overcome these challenges</th>
</tr>
</thead>
<tbody>
<tr>
<td>Diversity of product lines makes accurately accounting for each product/product line cost ineffective</td>
<td>Northrop Grumman’s customer base is primarily the U.S. Government, principally the Department of Defense and intelligence community. We also conduct business with foreign, state and local governments, as well as commercial customers. Our portfolio of products and solutions include autonomous systems, cyber, C4ISR, strike, and logistics and modernization. Due to the nature of our business, broad product portfolio, and customer requirements the allocation of emissions to an individual product or customer is difficult. Consequently, we provide our full GHG inventory so that customers may allocate in accordance with their methodology.</td>
</tr>
</tbody>
</table>

**SC1.4**

(SC1.4) Do you plan to develop your capabilities to allocate emissions to your customers in the future?

No

**SC1.4b**

(SC1.4b) Explain why you do not plan to develop capabilities to allocate emissions to your customers.

Northrop Grumman’s customer base is primarily the U.S. Government, principally the Department of Defense and intelligence community. We also conduct business with foreign,
state and local governments, as well as commercial customers. Our broad portfolio of capabilities and technologies deliver innovative platforms, systems and solutions in space; manned and autonomous airborne systems; including strike; strategic deterrence systems; hypersonic; missile defense; weapons systems; cyber; command, control, communications and computers, intelligence, surveillance and reconnaissance (C4ISR); and logistics and modernization. Due to the nature of our business, broad product portfolio, and customer requirements, the allocation of emissions to an individual product is difficult.

**SC2.1**

(SC2.1) Please propose any mutually beneficial climate-related projects you could collaborate on with specific CDP Supply Chain members.

**SC2.2**

(SC2.2) Have requests or initiatives by CDP Supply Chain members prompted your organization to take organizational-level emissions reduction initiatives?  
No

**SC4.1**

(SC4.1) Are you providing product level data for your organization’s goods or services?  
No, I am not providing data

**Submit your response**

In which language are you submitting your response?  
English

Please confirm how your response should be handled by CDP
